

SMLP5-5 Kit

#### **Features**

- Rugged, dependable, and backed by industry-best 5-year warranty
- Wave ID tests up to three wavelengths simultaneously slashing test time
- Field-swappable connector adapters for maximum flexibility
- Long battery life from globally available AA batteries

### **Applications**

- Certify multimode and single-mode links per TIA/EIA standards
- Passive Optical Networks (PON) testing
- Certification report generation with TRM® 2.0 software
- Fiber identification for splicing and continuity checking

Optical Loss Test Sets (OLTS) provide the most accurate method for determining the total loss of a link. AFL's OLTS have been an industry favorite for over 30 years with more than 100,000 units shipped. Leading service providers and enterprise customers rely on AFL's OLTS for their ruggedness, reliability, and best-in-the-industry 5-year warranty.

An OLTS test is performed with a light source on one end of the fiber sending a continuous wave at specific wavelength(s) and a power meter on the opposite end measuring the light received. The loss measured is compared to the loss budget, which is usually calculated prior to installation, and reflects the industry standards used to ensure that the link can meet its application requirements.

OLTS are mainly used to certify multimode and single-mode links, test Passive Optical Networks (PONs), identify fibers before splicing, and to ensure network continuity.

**Designed for use in outside plant environments:** AFL OLTS are extremely rugged and withstand one-meter drops, have splash resistant controls that are easy to use with gloves on, and the field-swappable connector adapters provide flexibility and access for cleaning optical ports at time of test.

**Test faster with fewer errors:** AFL's Wave ID increases test speed by performing simultaneous multi-wavelength testing that cuts loss measurement time in half or more. AFL's automatic wavelength identification eliminates setup errors and simplifies coordination between users at opposite ends of fiber.

## **Specifications**<sup>a</sup>

| OPTICAL SPECIFICATIONS - POWER METERS |   |   |   |  |  |

| Weight   | 0.29 kg (0.65 lb)                         |  |  |

#### Notes

- a. All specifications valid at 25  $^{\circ}\text{C}$  unless otherwise specified.
- b. May be used to test 50 or 62.5  $\mu m$  fiber with supplied mandrels.
- c. Output power will be approximately 3 dB less if a 50 µm mandrel-wrapped jumper is used instead of a 62.5 µm mandrel-wrapped jumper.
- d. Adjustable 2 dB.

## **Ordering Information**

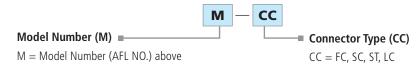

Test kits include light source, power meter, protective rubber boots, AA batteries, adapter caps, and carry case.

|                     | IEC                 | Compliant to IEC 14763-3 for systems and methods for the inspection and testing of installed optical fiber cabling*    |  |
|                     | AS/NZS              | Compliant to AS/NZS 14763.3 for systems and methods for the inspection and testing of installed optical fiber cabling* |  |
|                     | IEC                 | Compliant to IEC 61280-4-1 for test procedures for installed optical fiber cable plant*                                |  |
|                     | IEC                 | Compliant to IEC 61280-4-2 for test procedures for installed optical fiber cable plant                                 |  |
| Generic Requirement | IEC                 | Compliant to IEC 61315 for requirements on calibration of fibre-optic power meters                                     |  |

<sup>\*</sup> A complementary encircled flux mode conditioner may be needed to comply with encircled flux launch conditions for testing multimode optical fiber cabling and components
