

PowerPulse Installation Guide for a Single 12V Car Battery

The 12V PowerPulse comes in a small box with a set of instructions.

Model: PP-12-L

Part #: 735X012

NSN: 6130-01-446-7166

1) Unscrew the nut connected to the negative terminal.

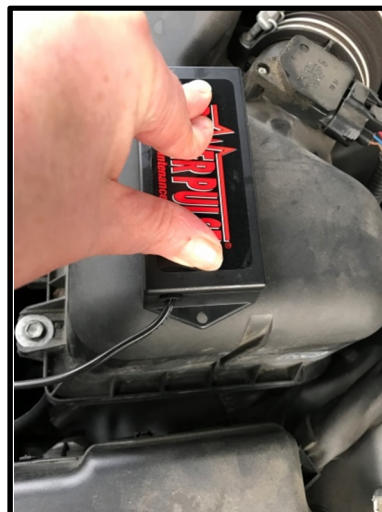

2) Slip the round metal lug at the end of the negative (black) wire onto the bolt and reinstall the nut tightly.

3) Repeat steps 1 & 2 for the positive (red) wire. Then secure any extra wire with a zip tie.

4) The circuit box can be mounted in various ways: with 2 rounded head screws, industrial adhesive or Velcro as shown above. (Attachment materials not included.)

5) Mount the PowerPulse near the battery and not on the battery itself.

6) The flashing red LED indicates the Power Pulse is working.
