

12 Outstanding features and benefits of the Lion Energy Safari UT

Lithium batteries

1. **Life Time Warranty**, not a 1-year or pro-rated warranty.
2. **Dumps 24 times on a single charge**, where traditional lead acid batteries only lift a dump trailer 6-8 times on single charge.
3. **Camp longer, nearly twice as long**, in fact the greater the power draw, the better Lithium lasts over lead acid.
4. **5,000 Life Cycles**, lead acid only has 250 Life Cycles (discharge to recharge), this has 5000 Life Cycles, a **life time battery**.
5. **Maintenance free**, lead acid requires recharge every 3-6 months or dies, this has a shelf life (holds charge) 1+ years.
6. **Recharge rather than replace**, when lead acid falls below Depth of Discharge it's dead. **Simply recharge Lithium.**
7. **Only 23 lbs.**, lighter weight than traditional 45-60 lbs. batteries.
8. **Plug-n-play**, simply remove lead acid and insert our Lithium UT battery, same 24 group size.
9. **Charges faster**, lithium accepts full amount of charge until its full, lead acid slows charge down so it doesn't boil over. A simple constant voltage charger or a lithium charge works best, instead of a 3 or 4 stage charger (these are designed to try and maximize lead acid charging).
10. **Can not over charge**, the BMS (Battery Management System) controls and limits further current from entering battery.
11. **Charge indicator right on battery**, with a quick glance, you can see the amount of charge that is left in the Lithium battery.
12. **Environmentally Safe**, no emissions, no toxic gases, no fluid discharge.

This Lion Energy Safari UT (Utility) lithium batter is a game changer for Utility, LQ, the RV Industry and retail consumers.

SKU/Part #50170143 MSRP \$999.00
